

## PRESS RELEASE

### Vogelsang to present rotary lobe pumps for chemical media at ACHEMA 2018

- **Flexible design of components**
- **Robust and reliable pump technology**

**Essen/Oldb., April 17, 2018** – [Vogelsang GmbH & Co. KG](http://www.vogelsang.com) will be showcasing rotary lobe pumps for demanding applications across a wide variety of industries at **ACHEMA from June 11 to 15** in Frankfurt/Main (**hall 8.0, booth F64**). The focus here is on the pumps of the IQ and VX series. “Especially when it comes to the process industry, we often have to deal with highly viscous, aggressive media. Oils, dyes, acids or other chemical fluids can only be efficiently pumped using robust and reliable pump technology that meets the strict safety standards. Thanks to their hard-wearing and compact design, our rotary lobe pumps are perfectly suited and have stood the test in numerous applications,” says managing director Harald Vogelsang. The models of the IQ and VX series are available in steel, stainless steel and a nickel-based alloy, making them particularly resistant to chemicals. The rotary lobe pumps are easy to maintain, self-priming and resistant to dry running.

#### **The IQ series: high pumping capacity combined with minimal wear**

The IQ series is easy to handle and cheap to operate. Variable connections provide flexible installation options. For maintenance the pump remains completely screwed into the pipe. The pump chamber consists of one central part, so that access to the conveying elements is free in a few easy steps. By simply removing the cover, the inside can be cleaned, foreign matter removed quickly and blockages cleared. There are only few spare parts, which reduces the time and cost of replacing wearing parts. The gearbox housing with integrated liquid buffer ensures excellent dry-running protection and a high suction capacity. The IQ pump delivers up to 154 m<sup>3</sup>/h at a pressure of up to max. 7 bar.

#### **The VX series: individual and mobile application**

As an all-round pump, the VX series is suitable for numerous industrial applications and can be individually adapted to the respective requirements in material, equipment and power. The reversible flow direction makes it possible that containers, tanks, etc., can be filled and emptied. Pulsation-free HiFlo<sup>®</sup> lobes ensure gentle pumping, ideal for media and substances that are sensitive to shear forces. The integrated InjectionSystem increases the efficiency of the pump and thus improves the suction capacity.

1 von 3

The pumps of the VX series are also suitable for mobile use and provide the pumping power that is required regardless of location.

**Vogelsang at ACHEMA, June 11-15, 2018, Frankfurt/Main Exhibition Center:  
hall 8.0, booth F64**

**About Vogelsang:**

Vogelsang GmbH & Co. KG develops, produces and distributes highly-engineered equipment that is easy to maintain. The head office is located in Essen/Oldb. in Lower Saxony. Founded in 1929 as a manufacturer of agricultural machinery, the company has grown to become a specialist in individually configurable machines for the agricultural, biogas, industrial, transportation, and waste water sectors. At present, the mid-sized, innovative family business employs over 900 people worldwide. Vogelsang ensures the highest production quality through its research, development and manufacturing operations at its location in Germany. As an international company, Vogelsang operates manufacturing centers domestically and abroad. A continuously growing network of subsidiaries and representatives allows Vogelsang to be present in more than 25 locations worldwide, in all European countries and important industrialized nations in the world.
