THE ROBUST WASTEWATER GRINDER

XRipper® with monolithic Ripper rotors for maximum efficiency
XRipper® XRP
XRipper® XRC-SIK
Twin-shaft shredder by Vogelsang, based on monolithic Ripper rotors, reliably reduces entangled materials in digesters and sewers, as well as fibrous disruptive matter, textiles, sanitary items and other rubbish in wastewater, thereby protecting downstream equipment from clogging and malfunctions.

It’s a serious and expensive problem for many municipalities and wastewater treatment organizations: frequent blockages of pipes, pipeline systems and pumping stations caused by wet wipes and other sanitary items and textiles disposed of in the toilet. In conjunction with the (fortunately) lower water consumption, the way products from drugstores are being handled in modern life is leading to considerable difficulties. Entangled materials from digesters are also repeatedly causing malfunctions in plant operations. Both of these issues create additional work and enormous costs for operators of sewage treatment plants and sewer networks.

One solution already used worldwide is the XRipper wastewater shredder by Vogelsang. As frequent malfunctions are time-consuming and onerous, investment in this twin-shaft shredder built from premium-quality, highly resistant material, will lead to a fast return on investment; the robust machine has proven time and time again that it can reduce the number of (emergency) maintenance visits required. Many customers have reported a 100 % success rate, with no further clogging issues.

The powerful and robust XRipper® series twin-shaft shredder by Vogelsang

Advantages of the XRipper® at a glance

- Economical shredding of solid and disruptive matter such as wet wipes, wood, fabric, trash and waste
- Efficient protection for pumps and system components from clogging, blockages and damage
- Long service life thanks to rugged design
- Fast access to all individual parts yet less service and maintenance work
- Added reliability thanks to cartridge mechanical seal technology

Speak with our specialists today to find out which XRipper® version is best for your needs.
With its tried-and-tested twin shaft version, the XRipper has proven to be a resilient, economical solution for reducing disruptive matter to a manageable size. In this way it protects downstream components and units from clogging, blockages and damage.

**The principle**
The Ripper rotors of the XRipper, with their one-piece construction, are installed so that they intermesh. Whereas water will pass by the XRipper more or less unobstructed, solid and disruptive matter, such as sanitary products, wood, fabric or waste from food production, is detected by the XRipper rotors and shredded to a manageable size.

Another important factor is that the Ripper rotors clean themselves due to their different speeds.

**For greater power and efficiency**
To attain maximum force transfer from shaft to the cutting elements, the monolithic Ripper rotors are manufactured from a single block of special steel or, optionally, from stainless steel. This leads to hard and precise cutting and thus an optimized cutting effect.

**Safe, easy to maintain and cost-efficient**
The monolithic design of the Ripper rotors not only ensures particularly thorough shredding and fault-free flow of the treated wastewater, but it also has a positive effect on economic efficiency when it comes to maintenance of the shredder. This is due because, rather than lots of individual cutting rings and spacers, only the rotors, which consist of a single piece, need to be replaced. This simplifies assembly to save time and ensures greater safety.

All other service and maintenance work, such as the replacement of seals, can be performed on-site quickly. Here too, fully preinstalled cartridge mechanical seals are used, which can be replaced in their entirety, increasing the XRipper’s already high level of availability even further.
The unrivaled, easy-to-maintain and highly adaptable XRipper® XRS for demand-optimized installation

The combination of powerful shredding, easy-to-maintain design and long service life has made the XRipper XRS a reliable fixture in industry, production plants and sewage treatment plants. It reliably shreds entangled materials in sewage treatment plants: sanitary items, textiles and clothing in the wastewater of mixed sewers as well as bones, fruit, vegetables and food remnants in industrial and commercial applications.

**Versatile and adaptable**
The XRipper XRS owes its versatility among potential applications to the many options and material alternatives that can be incorporated in its construction. For instance, the housing can be made from cast iron, steel or stainless steel, while shredder rotors are available in specialized steel or stainless steel. Optional connector boxes separate heavy material upstream from the XRipper. Drive power is provided by geared motors or parallel shaft geared motors, connected to the XRipper either directly or via a coupling.

**Durable and time-saving**
Regardless of the version selected, with an XRipper XRS, you can rely on reliable solids reduction and efficient protection from disruptive matter while enjoying maximum ease of maintenance. Thanks to the QuickService design typical of Vogelsang products, the shredder tools can be easily accessed with just a few hand motions. All maintenance work and the replacement of all wearing parts can be accomplished rapidly and with ease – with no need to disassemble the XRipper XRS from the pipe.

**Advantages of the XRipper® XRS**
- Easy to maintain thanks to the QuickService design
- Versatile thanks to comprehensive range of features and options
- Economical processing of solids and reliable protection from disruptive matter
Pumping stations and collection shafts are not large working spaces. Space everywhere is at a premium, maintenance teams have hardly any room to maneuver and there isn’t much air left for the installation of additional machines for wastewater pretreatment.

The XRipper XRP delivers reliable protection from clogging with minimal space requirement: a twin-shaft shredder with the motor arranged vertically above the cutter and extremely low space requirement from flange to flange. Furthermore, the inline arrangement where inlet and outlet are directly opposite one another facilitates retrofit installation.

Slimmed-down design and maintenance
Like all XRippers, the wastewater mostly flows unhindered through the generously dimensioned, specially designed housing of the XRP while wet wipes, textiles, waste and entangled materials are systematically reduced to a manageable size by the Ripper rotors.

Here as well, the practical design concept allows quick and easy maintenance and part replacement: The complete functional unit – drive motor, gearbox, shafts and Ripper rotors – can be lifted up and out of the XRP, thanks to its vertical design.

Efficient protection with low power requirements
The XRipper XRP requires very little drive power to reliably protect the downstream components. At low speed, high torque is available for shredding disruptive matter. The Ripper rotors reliably shred virtually all disruptive matter. Directly coupled parallel shaft geared motors designed to IP55 provide the drive power. Optionally, in the case of submersed operation, submersible motors can be used.

Advantages of the XRipper® XRP

- Vertical, space-saving “inline” installation in the tightest of spaces
- Efficient and reliable protection thanks to high torque
- Easy to maintain thanks to straightforward access to the functional unit
Installing shredders directly in the closed pipeline of a wastewater system is one option. Another effective measure to protect against disruptions is to install a shredder in open sewage channels, or inflow or supply flow structures of pump sumps and collection shafts.

Because of its position, the shredder should be as free as possible from interruptions and have a low-maintenance requirement – challenges that the robust and flow-optimized XRipper XRC-SIK successfully meets. Its design with bearings on both sides ensures interruption-free shredding, even with the most coarse disruptive matter (such as cleaning rags, wood, garbage, clothes or sanitary items), while the wastewater flows largely unimpeded through the large housing. This ensures that wastewater drains off reliably without causing blockages, clogging or damage to downstream pumps and fittings.

**Runs on rails**

To simplify installation and maintenance, the XRipper XRC-SIK is mounted on a Sewer Integration Kit (SIK) before leaving the factory. This system of rails is used to position the XRipper directly in the sewer or in front of its inlet or outlet. When maintenance is required, the response team simply pulls the shredder out of the sewer via the rail system, using a crane. The SIK is also designed to allow simple installation against slanted or round walls.

Like all XRippers, replacement of the monolithic Ripper rotors and seals is performed rapidly: On the XRC-SIK as well, simply remove the cover for free access to all components, with no need to disassemble the drive beforehand.

**Application-specific and energy-efficient drive**

The parallel shaft geared motor with IP55 protection rating is just as compact as the shredder itself. Floodable or flooded submersible motors are available for the XRC-SIK. Low speeds and high torque give the Ripper rotors outstanding force at relatively low drive power.

**Advantages of the XRipper® XRC-SIK**

- Extremely compact design
- Simple removal and positioning with the Sewer Integration Kit (SIK)
- No need for fastening hardware or work
The new XRipper® XRG for maximum flow rates

POWERFUL GIANT

High flow rates, such as those occurring in large sewers and inflows of sewage treatment plants, can only be mastered with appropriately large yet efficient shredders. This is the only way to reliably catch and grind all disruptive matter contained in the wastewater, in order to reliably protect downstream systems from clogging and blockages.

The principle
The XRipper XRG was developed specifically for these applications. The sieves of the High Capacity Units arranged laterally in the housing permit large quantities of water and wastewater to pass by unhindered, while catching and holding back the disruptive matter and waste. This is continuously fed into the Ripper rotors by the separately driven, slow-rotating yet powerful clearing units, where it is shredded to a manageable size.

Individual drives for each function
The Ripper rotors and clearing units of the XRipper XRG are driven independently of one another. This allows optimal adaptation to their respective tasks, with no need for extra power transmission components. This also simplifies removal of the functional unit – removal of a couple of screws on the housing is all that is required. Simultaneously, each drive can be individually monitored. The corrective measures to be taken in the event of an interruption are specifically oriented to that part of the shredder, while the rest of the machine continues to do its job.
Unique design
The XRipper XRG is equipped with monolithic one-piece Ripper rotors. They are extremely rigid, produced entirely from a single block and perform the function of the otherwise necessary support shaft: transmitting the drive power evenly over the entire length. This unique design also makes intermediate bearings superfluous while simultaneously simplifying the replacement of parts. To access the functional unit comprising the motor, gearbox, Ripper rotors and counter bearings, it is simply pulled up and out of the housing. The housing remains in the sewer while all essential parts are easy to access, and maintenance work can be performed in dry conditions.

Advantages of the XRipper® XRG
- Monolithic one-piece Ripper rotors
- High flow rates
- Reliable separation and shredding of disruptive matter
- On-site service and maintenance
WHEN IT COMES TO SERVICE, WE LEAVE NOTHING TO CHANCE

Comprehensive services for smooth operation and a long lifetime

Support and supply from A to Z
Because we are aware that close customer proximity is essential for our mutual success, we design our services to best meet your needs. In Germany and in countries where we have subsidiaries, Vogelsang service centers and contractual partners generate an active dialog with our customers and provide reliable support.

This means you always get the precise support you need in every phase of our partnership. Our highly qualified staff make it possible – experts such as consultants and technicians who know your Vogelsang machines inside and out.

Since its establishment in 1929, Vogelsang has become an internationally recognized mechanical engineering company with numerous branches, sales centers and subsidiaries.
We think ahead
Thinking ahead in your best interest begins with our extensive and detailed product documentation. Spare parts are available within a short time due to our high degree of vertical integration in production. In addition, you will always find an authorized service partner in your area who can help with repairs and wear part replacement. The Vogelsang ServicePack completes the offer. Whether you need start-up, on-site training, training at the Vogelsang facility, or full service support with a maintenance contract and a wear parts service package – we offer a support program tailored specifically to your needs.
What we offer

We provide solutions in the following sectors:

AGRICULTURAL TECHNOLOGY, BIOGAS, INDUSTRY, TRANSPORTATION, WASTEWATER

Our broad range of products and services

• Consulting and service
• Data management and control technology
• Disintegration technology
• Individually tailored solutions for special applications
• Pumps and pump systems
• Solid matter feeders
• Solids reduction, separators and mixers
• Spreading technology
• Supply, disposal and cleaning
