

## **Press Release**

### **Farmet becomes new cooperation partner for Vogelsang SynCult**

#### **Complete kit for the Farmet Softer short disc harrow for surface tilling of liquid manure into soil**

**Essen (Oldb.), Germany, 12 September 2016** – Hugo Vogelsang Maschinenbau GmbH has concluded another cooperation agreement with a manufacturer of tillage equipment. Effective immediately the Farmet Softer short disc harrow can now be combined with the Vogelsang SynCult. "Farmet is a Czech manufacturer of innovative agricultural machinery. They bring extensive experience of tillage to this partnership," explains Harald Vogelsang, Managing Director of Hugo Vogelsang Maschinenbau GmbH. "The Czech republic has a large amount of agricultural land that can really benefit in terms of work and cost savings from carrying out soil tillage and liquid manure spreading at the same time."

#### **Retention of the full manufacturer's guarantee**

SynCult is an upgrade kit for carrying out tillage and liquid manure spreading directly. In Germany, it can be added as an upgrade to the equipment of five different partners: Amazone, Väderstad, Köckerling, Pöttinger and Horsch. The complete kit contains all components necessary to upgrade a short disc harrow. This means that the manufacturer's guarantees for the product can be retained and the liquid manure spreading system on the tillage equipment will attain a long service life. No welding work or any other machining work is required to install SynCult. This means that the manufacturer's guarantee for the Farmet short disc harrow retains full validity.

#### **Economic liquid manure spreading**

The integrated distributor ensures that liquid manure is homogenously distributed in the discharge hoses of SynCult. These hoses guarantee trouble-free fertilisation due to their precise positioning. The liquid manure outlet pipes place the liquid manure directly in front of the discs, so that it can be spread directly with as little emissions as possible. The SynCult spreading equipment reduces the number of vehicle transits, saving time and costs.

**About Vogelsang:**

Hugo Vogelsang Maschinenbau GmbH is an internationally operating machine construction company which is headquartered in the municipality of Essen/Oldenburg in Lower Saxony. Founded in 1929 as a manufacturer of agricultural machinery, the company has grown to become a specialist in pumping, shredding, distribution and spreading technology for the agricultural, biogas, industrial and municipal sectors. Today, the company's major business areas are biogas, wastewater, and vacuum disposal technology alongside agriculture. Vogelsang currently employs just about 700 employees worldwide. The group comprises more than 20 subsidiaries, branches, and sales offices as well as two production facilities in Germany. Supplemented by a global dealer network, the company exports its products to all European countries, as well as to the world's important industrial nations. Further information can be found online at: [www.vogelsang.info](http://www.vogelsang.info)

**About Farmet:**

The joint-stock company Farmet a.s. is a dynamically developing Czech company with headquarters in Česká Skalice. As a machine manufacturer with tradition, Farmet a.s. has been manufacturing agriculture machinery for two market areas since 1992. The Agricultural Engineering division is specialised in the development and manufacturing of agricultural tillage and sowing machines. The Oil & Feed Tech division is among the world leaders in the manufacturing and supply of machines for oil seed processing, filtration and refining of vegetable oils and extrusion technologies for animal feed.
